

Empathy Map

Date	30 September 2026
Team ID	xxxxxx
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS "I have a complete script in my head, but I don't have the drawing skills to illustrate it." "AI image generators keep changing my character's face, hair, and clothes in every panel!" "I spend too many hours manually stitching panels and editing speech bubbles in Photoshop."	PERSONA NAME Alex <i>(Indie Writer & Comic Creator)</i>	THINKS "Can Gemini parse my raw script and break it down into effective visual panel beats?" "How can I lock my main character's visual identity across a 6-panel story arc?" "If I could automate panel generation and balloon layout, I could publish weekly webcomics!"
DOES - Writes script drafts, scene descriptions, and dialogue in text documents. - Experimentally prompts text-to-image AI models, struggling with inconsistent art styles. - Manually edits panel borders, dialogue bubbles, and captions in image manipulation software.		FEELS Pains: Overwhelmed by illustration mechanics; frustrated by character inconsistency across frames. Gains: Empowered by rapid AI visual prototyping; thrilled to see written narratives turn into full comic pages.
