

Problem-Solution Fit

Date	30 September 2026
Team ID	PNT2026TMID98765
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	5 Marks

Problem-Solution Fit Canvas: Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] • Primary Users: Independent comic creators, webtoon artists, graphic novel hobbyists, and digital storytellers. • Secondary Users: Educators, marketing content creators, and writers seeking quick visual storyboard drafts without drawing skills.	6. CUSTOMER LIMITATIONS [CL] <i>EG. BUDGET, DEVICES</i> • Budget: Limited financial resources for costly art software licenses or freelance art budgets. • Devices: standard laptops or tablets without high-end dedicated GPUs. • Technical Skills: Lack of formal illustration, digital painting, or complex prompt engineering expertise.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] • Manual Digital Illustration (Photoshop/Clip Studio): - Pros: High art control & quality. - Cons: Extremely slow, steep learning curve. • Generic AI Generators (Midjourney/DALL-E): - Pros: Rapid single image creation. - Cons: Inconsistent characters, no script parsing or speech bubble layout tools.
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] • High time investment per page (10–20 hours per comic page). [Daily/Weekly Pain] • Severe character visual inconsistency across panels. [High Frequency] • Bottleneck in translating script dialogue into visual comic panels. [Continuous] • Prohibitive expense of hiring freelance illustrators (\$100–\$300/page). [Per Project]	9. PROBLEM ROOT / CAUSE [RC] • Traditional comic production demands multiple specialized visual art skills (penciling, inking, coloring, lettering, paneling) that story writers rarely possess simultaneously. • Generic AI art generators lack contextual story memory and sequential character consistency across panel grids.	7. BEHAVIOR + ITS INTENSITY [BE] • Writing story scripts in standard text editors (Word, Notion). [High Intensity] • Sketching rough paper thumbnails or searching stock reference poses. [Medium Intensity] • Sharing story drafts on webtoon forums for creator feedback. [High Intensity]
3. TRIGGERS TO ACT [TR] • Impending publishing deadlines for webtoon or indie series. • Sudden surge of narrative script ideas without visual illustration capability. • Excessive cost quotes or long turnaround delays from freelance artists.	10. YOUR SOLUTION [SL] • ComicCraft: AI-powered end-to-end comic story creator driven by Google Gemini Models. • Core Capabilities: Automated script parsing into structured panel beats, character style anchor persistence, multimodal panel art synthesis, auto speech-bubble layout, and web/PDF comic export.	8. CHANNELS OF BEHAVIOR [CH] ONLINE: • Webtoon Canvas, Tapas, Reddit (r/ComicCrit, r/ComicBookCollabs), Discord creator communities, Twitter/X. OFFLINE: • Indie comic conventions, local writer workshops, zine fairs, print graphic novel clubs.
4. EMOTIONS BEFORE / AFTER [EM] • Before: Frustrated by illustration skill barriers, exhausted by slow progress, anxious over art inconsistency. • After: Empowered, creative excitement, confident in rapid publishing, delighted by instant multimodal rendering.
